Course of Study
Choice Based Credit System
B. Tech. (Electrical Engineering)
(Effective from Academic Year 2017-18)

Department of Electrical Engineering,
SGGS Institute of Engineering and Technology, Vishnupuri,
Nanded-431606 (MS), India

(An autonomous institute established by Govt. of Maharashtra)

SGGS Institute of Engineering and Technology, Vishnupuri, Nanded

Department of Electrical Engineering

Choice Based Credit System

B. Tech. (Electrical Engineering)

From Academic Year 2017-18

Semester-VII					
Course Code	**Name of the Course**	**Lectures**	**Tutorials**	**Practical**	**Credits**
EE401	Industrial Drives and Control	4	-	2	5
EE403	Switchgear and Protection	4	-	2	5
EE405	Electrical Machine Design	3	-	2	4
EE407	Industrial Economics and Management	3	-	-	3
EE409	Elective –IV	3	-	2	4
	Sub Total	**17**	**-**	**08**	**21**

Semester-VIII (STRUCTURE A)					
Course Code	**Name of the Course**	**Lectures**	**Tutorials**	**Practical**	**Credits**
EE402	Elective –V	4	-	-	4
EE404	Elective – VI	3	-	2	4
EE406	Seminar on Industrial Training	-	-	2	1
EE408	Project (In house)	-	-	16	8
	Sub Total	**07**	**-**	**20**	**17**
	Total	**24**	**-**	**28**	**38**

Semester-VIII (STRUCTURE B)					
Course Code	**Name of the Course**	**Lectures**	**Tutorials**	**Practical**	**Credits**
EE406	Seminar on Industrial Training	-	-	2	1
EE410	Project (Industry/Research Institute)	-	-	32	16
	Sub Total	**0**	**-**	**34**	**17**
	Total	**17**	**-**	**42**	**38**

A student can opt for any one from the structure A and B. Structure A is for students doing the project in institute and structure B is for students carrying project in industry.

Elective IV:

EE409A: High Voltage Engineering
EE409B: PLC and SCADA
EE409C: Energy Audit and Conservation

Elective V:
EE402A: HVDC and FACTS
EE402B: Power System Restructuring and Deregulation
EE402C: Artificial Neural Networks and Deep Learning
EE402D: Smart Electric Grid

Elective VI:
EE404A: Power Quality and Harmonics
EE404B: Embedded System Design
EE404C: Advanced Control System

Open Elective-

SEM VII

1. EEO411 Industrial Drives and Control**(L-4), (Pr-0)**
2. EEO413 Energy Audit and Conservation**(L-4), (Pr-0)**

SEM VIII

1. EEO410 Smart Electric Grid **(L-4), (Pr-0)**
2. EEO412 Artificial Neural Networks and Deep Learning**(L-4), (Pr-0)**

- **Students may register for Open Elective in place of Professional/Departmental Elective or may learn as an additional subject. All Open Elective offered by Electrical Department are of 4 Credit.**

- **Attendance Criteria:** Students have to maintain 75% attendance in all the registered courses in a semester to be eligible for appearing examinations.

SEMESTER-VII

EE401 Industrial Drives and Control				
Teaching Scheme :		**Examination Scheme:**		
Lectures	4 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks		
Tutorials	--			
Practical	2 Hrs/Week			
Credits (Th)	4	Credits(P)	1	
Prerequisites Courses:				
1	Electrical Machines, Power electronics & Control System			
Course Objective:				
1	Provide the basics of DC and AC variable speed drives.			
2	Develop awareness for use of variable speed drives for various applications in industry.			
3	Develop the ability to repair and maintain the drive panels.			
4	Make the student aware of research avenues in the field of Electrical Drives.			
Course Outcomes:Students' will be able to:				
1	Technical expertise of electrical machines & drives.			
2	Apply the knowledge to practical industrial systems			
3	Self-learning new technology of electrical drives.			
4	Analyse and solve numerical problems on electrical drives.			
5	Write technical reports & give presentation on industrial drive systems.			
6	Describe the modern electric machines, drives, power converters, and control circuits for specific application.			
Syllabus :				
Unit 1	**Introduction: (06 Hours)** Advantages of Electrical Drives, Parts of Electrical drive, Choice of Electric drives Dynamics of Electrical drives: fundamental torque equations, multiquadrant operation, nature and classification of load torques, steady state stability, concept of load equalization in drives.			
Unit 2	**Control of Electrical Drives: (06 Hours)** Modes of operation: Steady state, Acceleration, Deceleration, Drive classification Closed loop control of drives: Current limit control, torque control, speed control, position control and control of multi motor drives, speed sensing, current sensing Classes of motor duty & criteria for selection of motor.			
Unit 3	**DC motor drives: (08 Hours)** Review of basic characteristics of DC motors. Single phase drives: Single phase half wave converter drives, semi converter drives, Full converter drives, Dual converter drives. Three phase drives: Three phase half wave drives, semi converter drives, full converter drives, dual converter drives. DC-DC converter drives: Principle of Rheostatic and regenerative braking control, combined control, two and four quadrant DC-DC converter fed drives. Introduction to closed loop control of DC drives.			
Unit 4	**Induction motor drives: (08 Hours)** Review of starting, braking and speed control of three phase induction motors.			

	Induction motor drives: Stator voltage control, Rotor voltage control, frequency control, Voltage and frequency control, Current control. Closed loop control of Induction motors. Principle of Scalar and Vector control of Induction motor. Multiquadrant operation of induction motor drives fed from Voltage Source Inverters. Static rotor resistance control method, static slip power recovery control-Static Scherbius drive and Static Kramer drive.
Unit 5	**Synchronous Motor Drives and Brushless DC drives: (06 Hours)** Review of starting, pull in and braking of Synchronous motor, Static variable frequency control for Synchronous motors. Load commutated inverter fed Synchronous motor drive, Introduction to closed loop control of Load commutated inverter fed Synchronous motor drive and Brushless DC drives.
Unit 6	**Drives for Specific Applications: (06 Hours)** Construction and operation of switched reluctance motor, torque equation converter circuits for SRM drives, closed loop motor operation, solar and battery power drive. Textile Mill: various stages and drive requirements control of ac motors for controlling torque. Steel Rolling Mill: reversing and continuous hot and cold rolling mills, Drive requirements, motors for mill drive. Cement mill: Stages in cement production, requirements of mill motors, Kiln drives, crusher drives, fan/blower drives and compressor drive. Sugar Mill: Requirements for various drive motors, selection of motors for various processes.

Text/ Reference Books:

1. Power Electronics by M.H. Rashid, 3rd Ed, PHI Pub. 2004.
2. Fundamentals of Electrical Drives by G. K. Dubey, Narosa Publishing house Books.
3. Modern Power Electronics and AC Drives by B. K. Bose, Pearson Education, Asia, 2003.
4. De N. K., Sen P. K., "Electric Drives", Prentice Hall of India.

Term Work:

At least eight experiments based on the curriculum from the following list should be performed.

1. Speed – torque characteristics of chopper fed D. C. series motor
2. Closed – loop speed control of chopper fed D. C. drive (Simulation)
3. Open loop speed control of single phase full wave, half controlled converter fed D. C. shunt motor
4. Open loop speed control of single phase full wave, full controlled converter fed D. C. shunt motor
5. Closed loop speed control of converter fed D. C. drive
6. Two quadrant single phase converter fed 5 HP DC drive (simulation)
7. Four quadrant single phase converter fed 5 HP DC drive (simulation)
8. Four quadrant chopper fed DC drive (simulation)
9. Speed control of slip – ring induction motor by rotor resistance control
10. Six – step VSI fed induction motor drive, (simulation)
11. Simulation of brushless DC motor drive
12. Speed control of induction motor drive
13. Study of Kramer speed control
14. Speed control of induction motor drive (simulation)

Practical Examination:

The examination will be of three hours duration and will consist of an experiment based on term work and followed by an oral based on above syllabus.

EE403 Switchgear and Protection			
Teaching Scheme :		**Examination Scheme:**	
Lectures	4 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	2 Hrs/Week		
Credits (Th)	4	Credits(P)	1
Prerequisites Courses:			
1	Power System Engineering		
Course Objective:			
1	To Introduce students to power system protection and switchgear		
2	To Teach students the protection systems used for electric machines, transformers, bus bars, overhead and underground feeders		
3	Develop in students an ability and skill to design the feasible protection systems needed for each main part of a power system		
4	Enhance students' knowledge of over- voltage protection and data transmission		
Course Outcomes:Students' will be able to:			
1	Knowledgeable in field of power system protection, circuit breakers, protective relaying and instrument transformer		
2	Comprehensive study of various relays used in power system protection.		
3	Discuss types of circuit breakers with their applications		
4	Identify rotor ,stator faults, interterm faults and their protection		
5	Design relevant protection system for the power system		
6	Ability to participate in professional multi-disciplinary teams		
Syllabus :			
Unit 1	**Fundamentals of Power System Protection: (06 Hours)** Principles of protection and switchgear, different types of switchgear, modes of classification, ratings and specifications. Protective Relaying: Need of protective relaying in power system, General idea about protective zone, Primary and backup protection, Desirable qualities of protective relaying		
Unit 2	**Arc Phenomenon and Circuit Breakers: (08 Hours)** Principles of circuit interruption, arc phenomenon, Restricting and recovery voltage. Arc quenching methods. Capacitive, inductive current breaking, resistance switching, Auto reclosing. Circuit Breakers: - Classification of C.B.s – air break, air blast, vacuum, minimum oil and bulk oil, SF6 C.B. L.T. switchgear: - MCB, MCCB, HRC fuses, type construction and application. Circuit breaker ratings, rewirable and H. R. C. fuses, their characteristics and applications.		
Unit 3	**Protective Relays: (06 Hours)** Classification of relays, Principle of working and characteristics of attracted armature, balanced beam, induction, disc and cup type relays, induction relays, Setting characteristics of over current; directional, differential, percentage differential and distance (impedance, reactance, mho) relays, introduction to static		

	relays, advantages & disadvantages.
Unit 4	**Transmission System Protection : (08 Hours)** Bus bar: Feeder and Transmission line protection. Bus bar protection, Frame leakage protection circulating current protection. Overcurrent relays, philosophy, ORCD.Principles of distance relaying, choice between impedance, reactance and mho types, pilot wire and carrier pilot protection, Zones of protection. Distance relay philosophy and coordination.
Unit 5	**Unit Protection(06 Hours)** Unit protection schemes, protection of transformer, generator.Alternators – Stator fault, stator inter turn protection. Unbalanced load, protection (Negative phase sequence [NPS] protection). Transformer – Use of Buccholz relay, differential protection, connection of C. T. and calculation of C.T.ratio needed for differential relaying, balanced and unbalanced restricted earth fault protection, frame leakage protection.
Unit 6	**Insulation Co-Ordination** : **(06 Hours)** Definitions (Dry flashover voltage FOV), WEF FOV, Impulse FOV, insulation, co-ordinating insulation and protective devices. Basic impulse insulation (BIL), Determination of line insulation. Insulation levels of substation equipment. Lightning arrester selection and location. Modern surge diverters and Necessity of power system earthing, Method of earthing the neutral, Peterson coil, earthing of transformer.Overvoltage studies.
Unit 7	**Advancements in Protection:** Introduction to Wide Area Monitoring System (WAMS) infrastructure. WAMS based protection schemes, Automated fault analysis.

Text/Reference Books:

1. Patara Basu & Chaudhary – Power System Protection. (New Delhi Oxford and IBH).
2. Sunil S. Rao – Switchgear & Protection. (Tata McGraw Hill).
3. A Web Course on 'Digital protection of power system':-Prof. Dr. S.A.Soman, IITBombay.
4. Protection of power systems: - Blackburn.
5. Fundamentals of power system protection: - Y.G.Paithankar, S.R.Bhide. -Prentice hall,India.

Term Work:

Minimum of Eight experiments based on the curriculum from the following list should be performed.

1. Current versus time characteristics of over current relays
2. Study of Electromechanical phase/earth/directional relays
3. Short circuit analysis of a simple power system up to six buses (usingMATLAB/MiPower software)
4. Relay coordination: Over current (using MATLAB/MiPower software)
5. Distance relay coordination (using MiPower/ MATLAB software)
6. Motor protection design (using MiPower/ MATLAB software)
7. Merz-Price protection of transformer.

8. Transmission line protection.
9. Study and use of relay testing kit.
10. Study and testing of moulded case circuit breaker.
11. Study of typical oil circuit breaker.
12. Characteristics of rewirable fuse and H.R.C. fuses.
13. Over voltage studies: line/transformer energization, capacitor switching (using MiPower software)

Practical Examination:

The examination will be of three hours duration and will consist of an experiment based on term work and followed by an oral based on above syllabus.

EE405 Electrical Machine Design			
Teaching Scheme :		**Examination Scheme:**	
Lectures	3 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	2 Hrs/Week		
Credits (Th)	3	Credits(P)	1
Prerequisites Courses:			
1	Electrical machines		
Course Objective:			
1	To make student understand basic of Electrical Machine design.		
2	To develop the capabilities in the student to apply basics of Electrical Engineering for design of Electrical machines.		
3	To make the student conversant with the design process of Electrical machines and Computer aided design of the Electrical machines.		
4	To make students capable for designing Electrical machine with high efficiency.		
Course Outcomes:Students' will be able to:			
1	Design Distribution and Power transformer with high efficiency.		
2	Evaluate performance of transformer related to temperature rise.		
3	Understand design of various induction motor.		
4	Analyse the performance of Induction motor and Synchronous motor.		
5	Apply Computer software for design of various Electrical Machines.		
Syllabus :			
Unit 1	**Constructional Details and Design of Transformers: (08 Hours)** Core and shell types. Distribution and Power transformers, core and core materials, cooling of cores, windings. Transformer oil, conservators and breathers. Output equation, EMF per turn. Ratio of iron loss to copper loss, Relation between core area and weights of iron and copper, optimum designs Core design. Design of windings. Design of insulation overall dimensions		
Unit 2	**Performance Evaluation of Transformer**: **(06 Hours)** Resistance of windings. Leakage reactance, mechanical forces. Calculation of no-load current. Equivalent circuit and performance characteristics, Temperature rise, Design of tank and radiators		

Unit 3	**Constructional Details and Design of Three Phase Induction Motors: (08 Hours)** Constructional details of Stator and Rotor, Output equation. Specific electric and magnetic loadings. Efficiency and power factor, main dimensions, Stator windings. Type of winding and connection. Turns per phase, shape of stator slots. Number of stator slots, Design of stator stampings. Calculation of air gap length. Design of squirrel cage rotor, Rotor bar current. Shape and size of rotor slots. End ring current. Area of end rings, slip. Design of wound rotor. Rotor windings. Use of standard stampings
Unit 4	**Operating Characteristics of Three Phase Induction Motors: (06 Hours)** No load current Magnetizing current, loss component short circuit current. Resistances, leakage reactance. Use of circle diagram to obtain performance figures. Calculation of static torque, maximum torque, maximum output, maximum power factor. Dispersion coefficient. Effect of dispersion coefficient on maximum p.f. and overload capacity
Unit 5	**Design of Synchronous Machines: (06 Hours)** Review of construction of water wheel and turbo alternators. Different parts and materials used for different parts, choice of electric and magnetic loadings, Output equation Determination of diameter and length. Length of air gap and effect of short circuit ratio on machine performance
Unit 6	**Computer Aided Design of Electrical Machines: (06 Hours)** Benefits of computer in machine design, methods of approach, optimization and computer aided design of induction motor and three phase transformer

Text/ Reference Books:

1. "A Course in Electrical Machine Design" - by A. K. Sawhney, Dhanpat Rai and Sons, Delhi.
2. V.N. Mittle and A. Mittle, "Design of Electrical Machines", Standard Publications & Distributors, Delhi, 2002
3. R.K. Agarwal, "Principles of Electrical Machine Design", S.K.Kataria& Sons, Delhi, 2002
4. S.K. Sen, "Principles of Electrical Machine Design with Computer Programmes", Oxford and IBH Publishing Co. Pvt Ltd., New Delhi, 1987.

Term Work:

The term work consists of the design reports along with the drawing sheets of assembly of Machines and the details there of in case of

1. Single phase transformer
2. Three phase transformer
3. Single phase induction motor
4. Three phase induction motor
5. Synchronous machines

• Any two software base calculation of transformer or induction motor design.

A teacher may add or replace any appropriate experiment / design calculation / Sheets to the Experiments list.

Practical Examination: The examination will be of three hours duration and will consist of an experiment based on term work and followed by an oral based on above syllabus

EE407 Industrial Economics and Management			
Teaching Scheme :		**Examination Scheme:**	
Lectures	3 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	--		
Credits (Th)	3	Credits(P)	--
Prerequisites Courses:			
1	NA		
Course Objective:			
1	To study the industrial management and economics concept.		
2	To Introduce Electrical Project Management.		
3	To Inculcate Enterprenual Culture in students.		
Course Outcomes:Students' will be able to:			
1	Apply Industrial Economics & management concepts in professional life.		
2	Learn personnel management skills and develop entrepreneurial qualities.		
3	Apply financial management concepts.		
4	Manage various Electrical Projects.		
5	Understand Various policies implemented by Government of India for Entrepreneurship.		
6	Implement management skills for various electrical projects.		
Syllabus :			
Unit 1	**Management Concept: (06 Hours)** Management, Administration, Organization, Characteristics of management, Managerial objectives, Managerial skills, Principles of management, Types of management, management chart, Project management, MIS		
Unit 2	**Industrial Ownership & Psychology: (08 Hours)** Types, single, Partnership, JSC, Co-Operative, public sector, Private sector, Merits and demerits. Concept of psychology, Scope, Group Dynamic, DifiBehavior, Objectives of Industrial psychology, Motivation, Theory of X and V, Industrial fatigue		
Unit 3	**Personal management: (06 Hours)** Aims, Objectives, Principle of personal management, Recruitment, Selection, Educating, Testing, A. Test, G.D. , P.I., Promotions, Various selections, Tests, Interviews, Techniques, T.A		
Unit 4	**Engineering Economics & Financial Management: (08 Hours)** Wealth, Wants, capital, Income, Demand and supply, Law of substitution, Supply Equilibrium, and price determination. Purpose of investment, Source of finance, Reserve, Surplus, Assets, Liabilities, Trial Blanca, Fanatical statement, Fanatical Ratio		
Unit 5	**Entrepreneurial qualities, Skills, Role of Government, Theory "i" Management: (06 Hours)** Global Management Practices, Information Technology for Management, Management Information Systems		
Unit 6	**Electrical Project Management: (06 Hours)** Choice & grading of major electrical equipment, and systems in project		

	management, Economics of single v/s multiple units, Co-ordination of ratings of equipment in electrical projects.

Text/ Reference Books:

1. Industrial Engineering and Management: O.P. Khanna, Dhanpatrai and Sons, (1992)
2. Management Today - Principles and practice - Gene, Burton, Manab Thakur- McGraw Hill. (1996).
3. Industrial analysis and management systems by S.Dalela and Manssoorali- Standard Publisher (1997).
4. Count your Chiken's before they Hatch by ArindamChoudhari, Vikas Publishing House, New Delhi, 2001.

Elective IV

EE409A High Voltage Engineering			
Teaching Scheme :		**Examination Scheme:**	
Lectures	3 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	2 Hrs / Week		
Credits (Th)	3	Credits(P)	1
Prerequisites Courses:			
1	Engineering Physics, Basic Electronics and Network Analysis		
Course Objective:			
1	The course covers the breakdown mechanisms in gaseous, liquid and solid insulation.		
2	Methods of generation and measurement of high voltage, impulse voltage and impulse current are also covered		
3	This course lays a foundation for higher studies in high voltage engineering.		
4	To study the measurement of High Voltages.		
Course Outcomes:Students' will be able to:			
1	Observe the breakdown mechanism in gaseous, liquid and solid insulations		
2	Illustrate the methods of High voltage generation, Impulse voltage and current		
3	Describe the methods of Measurement High voltage, Impulse voltage and current.		
4	Design various circuits for the measurement of high frequency voltages and currents.		
5	Apply the different tests done on insulators, circuit breakers, cables, transformers ,LA etc.		
6	Discuss the principles behind the partial discharges		
Syllabus :			
Unit 1	**Breakdown in Gaseous Medium: (06 Hours)** Townsend mechanism of breakdown in gases, streamer (kanal) mechanism of breakdown in gases, derivation of breakdown criterion for Townsend and streamer mechanisms. Paschen's law for breakdown voltage in gases, effect of pressure and gap distance on breakdown voltage		

Unit 2	**Breakdown In Liquid and Solid Insulation: (06 Hours)** Comparison of pure and commercial liquids for insulation, breakdown in pure liquids, effect of hydrostatic pressure on breakdown strength. Breakdown in commercial liquids - suspended particle theory, cavitation and bubble theory, thermal breakdown, stressed oil volume theory. Types of breakdown mechanisms in solids - intrinsic, electromechanical, treeing and tracking, thermal breakdown, electrochemical, breakdown due to internal discharges. Breakdown in composite dielectrics, applications of solid dielectrics like paper, mica, glass and ceramics
Unit 3	**Generation of High Voltages: (06 Hours)** Generation of high D.C. voltages by rectifiers, voltage doubler and multiplier circuits, electrostatic machines - Van de Graaff generator, electrostatic generator. Generation of high A.C. voltages by cascade transformer set, resonant transformer, Tesla coil for generation of high frequency A.C. voltage
Unit 4	**Generation Of Impulse Voltage and Current: (06 Hours)** Standard impulse wave shape, analysis of model and commercial impulse generation circuits, wave shape control, Marx circuit, tripping and control of impulse generation. Generation of switching surges, generation of impulse current
Unit 5	**Measurement Of High Voltage and Current: (06 Hours)** Peak voltage measurement by Chubb - Fortescue method, spark gaps, sphere gap, uniform field gap, rod gap, electrostatic voltmeter, measurement of high voltage by an ammeter in series with high impedance, use of rectifier and voltage divider. Measurement of high A.C., D.C. and impulse currents by resistive shunts- Hall generator, current transformer with electro-optical signal converter, squirrel-cage shunt, Rogowski coil
Unit 6	**High Voltage Testing and Partial Discharges: (06 Hours)** High voltage testing of-insulators, bushings, circuit breakers, cables, transformers, lightning arrestors and power capacitors. Phenomenon of partial discharges (PD), internal and surface discharges, effects of PD, equivalent circuit of PD phenomenon, measurement of apparent charge. PD detection - straight detection method, wide band and narrow band detection circuits. Bridge detection method, calibration of PD detectors

Text/ Reference Books:

1. 'High Voltage Engineering Fundamentals' by E. Kuffel& W.S. Zaengl, Pergamon Press, 1992
2. 'High Voltage Engineering' by M.S. Naidu & V. Kamaraju, Tata Mc-Graw Hill, 2002
3. 'High Voltage Engineering' by C.L. Wadhwa, New Age, 2007
4. 'High Voltage Engineering' by E. Kuffel& Abdullah

Term Work:

It will consist of a record of at least eight experiment from the following based on the prescribed Syllabus:

1. Simulation study of voltage doubler circuits using PSpice.
2. Simulation study of impulse voltage generation circuits using PSpice.
3. Experimental study of HVAC generation.
4. Verification of Paschen's law.

5. Experimental study of Greinacher voltage doubler.
6. Experimental study of impulse voltage generation.
7. Breakdown test of insulating oil using Oil Test Kit.
8. Break down test of hardboard insulation plate
9. PD measurement for needle-plane electrode system.
10. To observe the corona using horn gap apparatus.
11. Plane to plane test for breakdown of air.
12. Hemisphere to plane test for breakdown of air.
13. Point to plane test for breakdown of air.
14. Study of tesla coil.

Practical Examination:

The examination will be of three hours duration and will consist of an experiment based on term work and followed by an oral based on above syllabus.

EE409B PLC and SCADA			
Teaching Scheme :		**Examination Scheme:**	
Lectures	3 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	2 Hrs/Week		
Credits (Th)	3	Credits(P)	1
Prerequisites Courses:			
1	Electrical Machines, Power electronics & Control System		
Course Objective:			
1	To understand the role of industrial automation for different processes		
2	To learn the application of PLC and SCADA based system in process control.		
3	Develop the ability to develop and programmed the PLCs for different processes		
4	Make the student aware of research avenues in the field of automation.		
Course Outcomes:Students' will be able to:			
1	Apply the knowledge of automation in machine control.		
2	Learn the basics and working principle of PLC.		
3	Know the basics of PLC and ladder diagram programming.		
4	Design the automation system for fast and value added quality product for economic growth through technological development		
5	Design and conduct practical in realistic constrain on motors such that it is applicable in manufacturing, testing and maintenance field.		
6	Solve engineering solution for fast growing industrial sector with reliable atomized system using PLC and SCADA system.		
Syllabus :			
Unit 1	**Basics of Automation:** **(06 Hours)** Introduction and evolution of Automation, Feedback and feed forward systems, Hierarchical levels of automation, introduction to plant automation.		
Unit 2	**Programmable Logic Controller (PLC) :** **(06 Hours)** Necessity and working principle along with block schematic of PLC, Programming languages, basic instruction for programming like bit, Arithmetic		

	file and Mathematical. Demonstration of PLC functioning and development of ladder for sequencing of motors, tank level control, ON-OFF temperature control.
Unit 3	**Components and Systems of PLC : (08 Hours)** PLC Hardware : Processors, The Power Supply and Programming Devices, The Memory System and I/O Interaction, The Discrete input/output System, The Analog input/output System, Logical Sensors, Logical Actuators.
Unit 4	**PLC PROGRAMMING : (08 Hours)** Introduction to Programming Languages, ladder diagram elements, ladder diagram examples, programmable controllers: relay sequencer, programmable controllers, programmable controller operation, programming, advanced features, ladder diagrams and programming for some typical examples of process control using ABB PLC, Timers and Counters
Unit 5	**Industrial PLC- ABB, GE Fanuc and Siemens make PLC: (08 Hours)** Introduction and programming of Allen Bradely make Micrologix1200c and 1100 PLC, siemens make PLC
Unit 6	**Supervisory Control And Data Acquisition(SCADA): (06 Hours)**Introduction to supervisory control and data acquisition (SCADA) as applied to process control systems: Introduction to various SCADA packages, study of RSVIEW32 (AB make package) development of mimics using RSVIEW32 SCADA package, Study of iFix SCADA package, WinCC.
Unit 7	Use of SCADA in Power Systems, Concept of Load dispatch, Role of Energy Management System applications in Power Management, Indian load dispatch structure

Text/ Reference Books:

2. C. D. Johnson, "Process Control Instrumentation Technology" Seventh Edition, Pearson Education, New Delhi 2003.
3. B. G. Liptak,"Instrument Engineers Handbook" (Edition) Vol-II and III, Chilton book Company.
4. Technical Manual –Yokogoawa, centum VP.
5. Webb J. W. and Ronald A. Reis "Programmable Controllers: Principles and Applications", Prentice Hall of India Pvt. Ltd. Fifth Edition, 2005.
6. John R. Hackworth and Frederick D. Hackworth "Programmable Logic Controllers", Jr. Third India Reprint 2005.
7. Parr A., Newnes, "Programmable Controllers: An Engineer's Guide", Butterwoth-Heinmen Ltd. 1993.
8. C. D. Johnson, "Microprocessor based Process Control", Prentice Hall International Edition.
9. Mini Thomas and John Douglas McDonald "Power System SCADA and Smart Grids" CRC Press

Term Work

Term work shall consist of at least six to eight assignment/tutorials/practical based on above syllabus. Some of the experiments may be from the following list:-

1. Study of AB Micrologix 1200c and 1100 PLC.
2. Development of simple ladder diagrams like AND/OR gate.
3. Developments of ladder diagram for the controlling motor operation.
4. Development of ladder diagram and simulation for the level control system.
5. Development of ladder diagram for bottling plant.
6. Study of software package RSVIEW32 (AB make) for SCADA.
7. Development of mimic diagram for a particular process using SCADA software.
8. Study of Hybrid controller control logix (AB MAKE).
9. Development of programs for control of processes using Hybrid controller.
10. Study of Yokogowa Centum VP.
11. Development of FBD programs on Centum VP for ON/OFF control.
12. Development of FBD programs on Centum VP for simple process control applications.
13. Visit to Load Dispatch Centre at ALDC, Nagpur or SLDC Kalwa, Mumbai

Practical Examination:

The examination will be of three hours duration and will consist of an experiment based on term work and followed by an oral based on above syllabus.

EE409C Energy Audit and Conservation			
Teaching Scheme :		**Examination Scheme:**	
Lectures	3 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	2 Hrs/ Week		
Credits (Th)	3	Credits(P)	1
Prerequisites Courses:			
1	Generation, transmission and distribution of Electric Power Switchgear and Protection		
Course Objective:			
1	To explain the current energy scenario and need of energy conservation.		
2	To demonstrate the advantages of energy audit.		
3	To demonstrate importance of energy management.		
4	To identify importance of energy efficiency in electrical utility.		
Course Outcomes:Students' will be able to:			
1	To implement conservation of energytechniques in electrical system.		
2	Evaluate the technical economic feasibility of the energy audit technique.		
3	To understand various kinds of tariffs in electrical utility.		
4	Explain captive power generation.		
5	Apply financial management in electrical conservation.		
6	Analyse captive power generation and co-generation.		
Syllabus :			
Unit 1	**Energy scenario:(06 Hours)** Energy scenario: Introduction, energy problems, energy use trends in developing countries, prospects of changes in energy supply, strategies for sustainable development, finite fossil reserve, Energy and environment, Need for renewable and energy efficiency, Energy conservation principles, Energy conservation in		

	industries, generation, transmission and distribution, household, commercial sectors, transport, agriculture.
Unit 2	**Energy Audit: (06 Hours)** Energy flow diagram, strategy of energy audit, comparison with standards, considerations in implementing energy with conservations programmes, instruments for energy audit, energy audit of illumination system, energy audit of electrical system, energy audit of heating ventilation and air conditioning systems, energy audit of compressed air system, energy audit of building, distribution and utilization system, economic analysis. Energy conservation Act 2003.
Unit 3	**Energy Management and Integrated Resource Planning:(06 Hours)** Definition and Objectives of Energy management, Energy management strategy, Key elements, Responsibilities and duties of Energy Manager, Energy efficiency Programs, Energy Monitoring System, Analysis techniques, Cumulative sum of differences (CUSUM).
Unit 4	**Energy efficiency in electrical utility: (06 Hours)** Electrical billing, power factor management, distribution and transformer losses, losses due to unbalance and due to harmonics, Demand Side Management, Demand-Response, Role of tariff in DSM and in Energy management, TOU tariff, Power factor tariff, Energy conservation in lighting system, HVAC system, Electrical Motors, Pump and pumping System.
Unit 5	**Financial Analysis and Management: (06 Hours)** Investment need, Financial analysis techniques, Calculation of Simple Pay-back period, return on investment, cash flows, risk and sensitivity analysis, Time value of money, Net Present value, Breakeven analysis, Cost optimization, Cost and Price of Energy services, Cost of Energy generated through Distributed Generation.
Unit 6	**Captive Power Generation:(06 Hours)** Types of captive power plants, financing of captive power plants, captive power plants in India, energy banking, energy wheeling, Carbon credits Cogeneration-Cogeneration technologies, industries suitable for cogeneration, allocation of costs. Sale of electricity to utility, impact of pricing of cogeneration, electric power plant reject heat, agricultural uses of waste heat, Potential of cogeneration in India.

Text/ Reference Books:

1. B. R. Gupta, "Generation of Electrical Energy" S.Chand Publication.
2. S. Rao & Dr. B. B. Parulekar, "Energy Technology: Non-conventional,Renewable and Conventional" Khanna Publishers.
3.Frank Kreith and George Burmeister, "Energy Management &Conservation", Amazon Publishers.
4. Beggs and Clive, "Energy Management Supply and Conservation", Wall Mart Publishers
5. K.Bhattacharya, MHJBollen, J .E.Dalder, "Operation of Restructured Power System", Kluwer Academic Publications.
6.S. C. Tripathy, "Utilization of Electrical Energy", Tata Mc Graw Hill.
7. Energy Conservation Act 2001.
8. Bureau of Energy Efficiency India web-site http://www.bee-india.com.

Term Work:

At least eight experiments based on the curriculum from the following list should be performed

1. Computing efficiency of DC motor/Induction Motor/Transformer.
2. Draw the energy flow diagram for an industry/shop floor division.
3. Study of various energy efficient equipment like LED lighting devices, Energy Efficient motors, Electronics ballast etc.
4. Study of Variable frequency drive based IM speed control for energy conservation.
5. Industry visit with an aim of

(i) Studying various energy management systems prevailing in a particular industry/Organization

(ii) Identifying the various energy conservation methods useful in a particular industry

6. Studying the various energy conservation methods useful in power generation, transmission and distribution
7. Study of APFC panel or Estimating the requirement of capacitance for power factor improvement.
8. Evaluating the energy conservation opportunity through various methods like simple payback period IRR and NPV.
9. Determine depreciation cost of a given energy conservation project/equipment.
10. Study of various measuring instruments used for energy audit: Lux meter, Power analyzer, flue gas analyzer.
11. Identifying the energy conservation opportunities in a lab, department or institute.
12. Visit to Small scale industry from Energy Audit perspective

Practical Examination:

The examination will be of three hours duration and will consist of an experiment based on term work and followed by an oral based on above syllabus.

Open Elective

EEO411 Industrial Drives & Control			
Teaching Scheme :		**Examination Scheme:**	
Lectures	4 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	--		
Credits (Th)	4	Credits(P)	--

Prerequisites Courses:	
1	Electrical Machines, Power electronics & Control System
Course Objective:	
1	Provide the basics of DC and AC variable speed drives.
2	Develop awareness for use of variable speed drives for various applications in industry.
3	Develop the ability to repair and maintain the drive panels.
4	Make the student aware of research avenues in the field of Electrical Drives.

Course Outcomes:Students' will be able to:	
1	Technical expertise of electrical machines & drives.
2	Apply the knowledge to practical industrial systems
3	Self-learning new technology of electrical drives.
4	Analyse and solve numerical problems on electrical drives.
5	Write technical reports & give presentation on industrial drive systems.
6	Describe the modern electric machines, drives, power converters, and control circuits for specific application.
Syllabus :	
Unit 1	**Introduction: (06 Hours)** Advantages of Electrical Drives, Parts of Electrical drive, Choice of Electric drives Dynamics of Electrical drives: fundamental torque equations, multiquadrant operation, nature and classification of load torques, steady state stability, concept of load equalization in drives.
Unit 2	**Control of Electrical Drives: (06 Hours)** Modes of operation: Steady state, Acceleration, Deceleration, Drive classification Closed loop control of drives: Current limit control, torque control, speed control, position control and control of multi motor drives, speed sensing, current sensing Classes of motor duty & criteria for selection of motor.
Unit 3	**DC motor drives: (08 Hours)** Review of basic characteristics of DC motors. Single phase drives: Single phase half wave converter drives, semi converter drives, Full converter drives, Dual converter drives. Three phase drives: Three phase half wave drives, semi converter drives, full converter drives, dual converter drives. DC-DC converter drives: Principle of Rheostatic and regenerative braking control, combined control, two and four quadrant DC-DC converter fed drives. Introduction to closed loop control of DC drives.
Unit 4	**Induction motor drives: (08 Hours)** Review of starting, braking and speed control of three phase induction motors. Induction motor drives: Stator voltage control, Rotor voltage control, frequency control, Voltage and frequency control, Current control. Closed loop control of Induction motors. Principle of Scalar and Vector control of Induction motor. Multiquadrant operation of induction motor drives fed from Voltage Source Inverters. Static rotor resistance control method, static slip power recovery control-Static Scherbius drive and Static Kramer drive.
Unit 5	**Synchronous Motor Drives and Brushless DC drives: (06 Hours)** Review of starting, pull in and braking of Synchronous motor, Static variable frequency control for Synchronous motors. Load commutated inverter fed Synchronous motor drive, Introduction to closed loop control of Load commutated inverter fed Synchronous motor drive and Brushless DC drives.
Unit 6	**Drives for Specific Applications: (06 Hours)** Construction and operation of switched reluctance motor, torque equation converter circuits for SRM drives, closed loop motor operation, solar and battery power drive. Textile Mill: various stages and drive requirements control of ac motors for controlling torque. Steel Rolling Mill: reversing and continuous hot and cold rolling mills, Drive requirements, motors for mill drive. Cement mill: Stages

	in cement production, requirements of mill motors, Kiln drives, crusher drives, fan/blower drives and compressor drive. Sugar Mill: Requirements for various drive motors, selection of motors for various processes.

EEO413 Energy Audit and Conservation			
Teaching Scheme :		**Examination Scheme:**	
Lectures	4 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	--		
Credits (Th)	4	Credits(P)	--
Prerequisites Courses:			
1	Generation, transmission and distribution of Electric Power Switchgear and Protection		
Course Objective:			
1	To explain the current energy scenario and need of energy conservation.		
2	To demonstrate the advantages of energy audit.		
3	To demonstrate importance of energy management.		
4	To identify importance of energy efficiency in electrical utility.		
Course Outcomes:Students' will be able to:			
1	To implement conservation of energytechniques in electrical system.		
2	Evaluate the technical economic feasibility of the energy audit technique.		
3	To understand various kinds of tariffs in electrical utility.		
4	Explain captive power generation.		
5	Apply financial management in electrical conservation.		
6	Analyse captive power generation and co-generation.		
Syllabus :			
Unit 1	**Energy scenario:(06 Hours)** Energy scenario: Introduction, energy problems, energy use trends in developing countries, prospects of changes in energy supply, strategies for sustainable development, finite fossil reserve, Energy and environment, Need for renewable and energy efficiency, Energy conservation principles, Energy conservation in industries, generation, transmission and distribution, household, commercial sectors, transport, agriculture.		
Unit 2	**Energy Audit: (06 Hours)** Energy flow diagram, strategy of energy audit, comparison with standards, considerations in implementing energy with conservations programmes, instruments for energy audit, energy audit of illumination system, energy audit of electrical system, energy audit of heating ventilation and air conditioning systems, energy audit of compressed air system, energy audit of building, distribution and		

	utilization system, economic analysis. Energy conservation Act 2003.
Unit 3	**Energy Management and Integrated Resource Planning:(06 Hours)** Definition and Objectives of Energy management, Energy management strategy, Key elements, Responsibilities and duties of Energy Manager, Energy efficiency Programs, Energy Monitoring System, Importance of SCADA, Analysis techniques, Cumulative sum of differences (CUSUM).
Unit 4	**Energy efficiency in electrical utility: (06 Hours)** Electrical billing, power factor management, distribution and transformer losses, losses due to unbalance and due to harmonics, Demand Side Management, Demand-Response, Role of tariff in DSM and in Energy management, TOU tariff, Power factor tariff, Energy conservation in lighting system, HVAC system, Electrical Motors, Pump and pumping System.
Unit 5	**Financial Analysis and Management: (06 Hours)** Investment need, Financial analysis techniques, Calculation of Simple Pay-back period, return on investment, cash flows, risk and sensitivity analysis, Time value of money, Net Present value, Breakeven analysis, Cost optimization, Cost and Price of Energy services, Cost of Energy generated through Distributed Generation.
Unit 6	**Captive Power Generation**:**(06 Hours)** Types of captive power plants, financing of captive power plants, captive power plants in India, energy banking, energy wheeling, Carbon credits Cogeneration-Cogeneration technologies, industries suitable for cogeneration, allocation of costs. Sale of electricity to utility, impact of pricing of cogeneration, electric power plant reject heat, agricultural uses of waste heat, Potential of cogeneration in India.

8. Bureau of Energy Efficiency India web-site http://www.bee-india.com.
7. Study of APFC panel or Estimating the requirement of capacitance for power factor improvement

SEMESTER- VIII (STRUCTURE A)

Elective V

EE402A HVDC and FACTS			
Teaching Scheme :		**Examination Scheme:**	
Lectures	4 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	--		
Credits (Th)	4	Credits(P)	--

Prerequisites Courses:	
1	Power Systems, Power Electronics
Course Objective:	
1	To analyse the operation of shunt and series compensators
2	To impart knowledge on FACTS controllers to improve AC Transmission Capability and Stability
3	To understand the configuration and working of HVDC & EHVAC systems
4	To analyze harmonics and to understand the different protection schemes and Harmonic filters for HVDC System
Course Outcomes: At the end of the course students' will be able to:	
1	Understand the power system operation and management.
2	Differentiate between EHVAC and HVDC systems and their suitability in case of power system installation.
3	Understand the technical and economic considerations of both EHVAC and HVDC systems.
4	Analyse various methods for Harmonic elimination.
5	Design various Reactive Power compensation schemes for AC systems.
6	Apply the concepts to electrical power transmission systems.
Syllabus :	
Unit 1	**Introduction: (08 Hours)** General Aspects HVDC Transmission: Constitution of EHVAC and DC links, Types of HVDC links, HVDC projects in India and abroad, limitations and advantages of HVDC transmission over EHVAC, Layout of HVDC station.
Unit 2	**Grid control and Protection: (10 Hours)** Grid control of thyristor valve, Basic means of control, Power reversal, Common Ignition Angle and Common Extinction Angle control, Constant Current control; Protection: Mis-operation of converters short circuit on a rectifier, commutation failure, causes and remedies, Protection of HVDC system, d. c. rectors, damper circuits, Over current protection and overvoltage protection.
Unit 3	**Reactive power compensation: (06 Hours)** Concept of reactive power compensation reactive Power balance in HVDC substations, Effect of angle of advance and extinction angle on reactive power requirement of converters.

Unit 4	**Harmonics and Filters and MTDC systems (08 Hours)** Characteristic and uncharacteristic harmonics causes, consequences and suppression troubles caused by harmonics, Definitions used in Harmonic distortion calculations, Harmonic filters: Types, Location, Criteria for adequacy, MTDC systems: Introduction, Potential Applications of MTDC Systems, Types of MTDC Systems, Control and Protection of MTDC Systems
Unit 5	**General considerations of FACTS (08 Hours)** FACTS Concept and General system Considerations, Limits of line loading capability(St. Clair curve of EHVAC Line loading), Power Flow and Dynamic Stability considerations of a transmission interconnection, Significance of controllable parameters, Comparison between HVDC and EHVAC(FACTS)
Unit 6	**Shunt, series and combined FACTS controllers: (08 Hours)** Shunt Controllers: Operation ofSVC and STATCOM, Operation of TSC, TCR, STATCOM - Comparison between SVC and STATCOM,Series Controllers: GCSC, TSSC, TCSC and SSSC operation and control, Sub-synchronous Resonance (SSR) and its damping, Combined series-shunt controllers: UPFC and IPFC

Text/ Reference Books:

1. ”HVDC Power Transmission System” K.R. Padiyar , Wiley Eastern Ltd., New Delhi.
2. “EHVAC and HVDC Transmission” - S. Rao, Khanna Pub. Delhi.
3. Understanding FACTS: Concepts and Technology of Flexible AC Transmission Systems, IEEE Press, 2000 by N.G. Hingorani & L. Gyugyi

EE402BPower System Restructuring and Deregulation			
Teaching Scheme :		**Examination Scheme:**	
Lectures	4 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	--		
Credits (Th)	4	Credits(P)	--
Prerequisites Courses:			
1	Power System Engineering, Power System Analysis and Stability		
Course Objective:			
1	To educate about the process of restructuring of Power System		
2	To analyse the concept of location marginal pricing and transmission rights		
3	To illustrate in-depth understanding of operation of deregulated electricity market system		
4	To gain knowledge of fundamental concept of congestion management		
Course Outcomes:Students’ will be able to:			
1	Describe the process of restructuring of power system		
2	Identify various operation of restructured power system		
3	Analyse pricing and transmission rights of Electricity.		
4	Analyse various cost components in Generation, transmission, distribution sector and tariff		

Syllabus :	
Unit 1	**Power Scenario in India : (06 Hrs)** Institutional structure before reforms. Roles of various key entities in India. Necessity of Deregulation or Restructuring. RC Act 1998 and Electricity Act 2003 and its implications for Restructuring & Deregulation. Institutional structure during reform. National Energy policy. Introduction to Energy Exchange and trading of Renewable Energy Credits and Carbon Credits.
Unit 2	**Economics of Power Sector: (06 Hrs)** Introduction to various concepts such as capital cost, debt and equity, depreciation, fixed and variable costs, working capital, profitability indices etc. Typical cost components of utilities such as return in equity, depreciation, interest and finance charges, O and M expenses etc. Key Indices for assessment of utility performances. Principles of Tariff setting, Phases of Tariff determination, consumer tariff & non-price issues.
Unit 3	**Power Sector Regulation : (04 Hrs)** Regulatory process in India, types and methods of Regulation, cost plus, performance-basedregulation, price cap, revenue cap regulation, rate of return regulation, benchmarking or yardstick regulation. Role of regulatory commission. Considerations of socio economic aspects in regulation.
Unit 4	**Introduction to Power Sector Restructuring : (06 Hrs)** Introduction, models based on energy trading or structural models – monopoly, single buyer, wholesale competition, retail competition. Models based on contractual arrangements – pool model, bilateral dispatch, pool and bilateral trades, multilateral trades, ownership models, ISO models. Competition for the market vs competition in the market, International experience With electricity reform – Latin America, Nordic Pool, UK, USA, China and India. California Energy Crisis.
Unit 5	**Electricity Markets: (06 Hrs)** Trading – electricity market places, rules that govern electricity markets, peculiarity of electricity as a commodity, various models of trading arrangements – integrated tradingmodel, wheeling trading model, decentralized trading model. Various electricity markets such as spot, day ahead, forward, future options, reserve, and ancillary services market. Market operation, settlement process, Market Clearing Price (MCP), Market power, market efficiency. Spot, dynamic and locational pricing. Overview of Electricity Market structure in India, power trending exchanges (Ref : NLDC website)
Unit 6	**Transmission Pricing & Transmission Congestion Issues: (06 Hrs)** Cost components of transmission system, Transmission pricing methods. Cost of transmissionservices, physical transmission rights. Pricing and related issues. Congestion in power network, reasons for congestion, classification of congestion management, useful definitions. Methods of congestion management, Locational marginal Pricing (LMR), Firm Transmission Right (FTR). Availability based Tariff (ABT) in India.

EE402C Artificial Neural Networks and Deep Learning			
Teaching Scheme :		**Examination Scheme:**	
Lectures	4 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	--		
Credits (Th)	4	Credits(P)	0
Prerequisites Courses:			
1	Linear Algebra, Matrix Calculus, Feedback Control Systems, Digital Signal Processing		
Course Objective:			
1	Understanding of basic concepts of Artificial Neural Networks and Architectures.		
2	Introduction to different training algorithms.		
3	Understanding the applications of ANN		
4	Understanding the concept of Deep Learning		
Course Outcomes:Students' will be able to:			
1	Understand and explain the basic concepts of Artificial Neural Networks.		
2	Analyse different ANN architectures.		
3	Understand and analyse the different training algorithms.		
4	Design and develop ANN applications in real world pattern recognition problems.		
5	Understand about Deep Learning Concepts.		
Syllabus :			
Unit 1	**Introduction to Neural Networks: (06 Hours)** Historical perspective, the biological inspiration, Neuron Model, Network architecture, Perceptron architecture, Hamming Network, Linear Vector Spaces, Linear Dependence, Inner Product, Norm, Orthogonality		
Unit 2	**Linear Transformations and Performance Surface Optimization for Neural Networks: (08 Hours)** Linear Transformations, Matrix Representations, Change of Basis, Eigenvalues		

	and Eigenvectors, Performance Surfaces and Optimum Points, Taylor Series, Directional Derivatives, Minima, Necessary Conditions for Optimality, Quadratic Functions, Performance Optimization, Steepest Descent, Newton's Method, Conjugate Gradient
Unit 3	**Windrow-Hoff and Backpropagation: (07 Hours)** Windrow-Hoff, ADALINE Network, MSE, LMS algorithm, Multilayer Perceptron, Pattern Classification, Back propagation algorithm. Performance Index, Chain Rule, Batch vs. Incremental Training, Convergence
Unit 4	**Variations on Backpropagation and Generalization: (07 Hours)** Drawbacks, Heuristic Modifications, Numerical Optimization Techniques, Generalization, Methods for improving Generalization: Estimation of Error, Early stopping, Regularization, Bayesian Analysis, Relationship between early stopping and regularization
Unit 5	**Associative Learning, Competitive Networks and Radial Basis Networks: (06 Hours)** Associative Learning, Unsupervised Hebb Rule, Simple Recognition Network, Instar Rule, Simple Recall Network, Outstar Rule, Competitive Networks, Hamming Network, Competitive Layer, Competitive rule in biology Self-organizing Feature Maps, Learning Vector Quantization, Radial Basis Function Networks, Training RBFN
Unit 6	**Understanding of Deep Learning: (06 Hours)** Restricted Boltzmann machine, Auto-encoder, Convolutional Neural Networks.

EE402DSmart Electric Grid			
Teaching Scheme :		**Examination Scheme:**	
Lectures	4 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	--		
Credits (Th)	4	Credits(P)	--
Course Objective:			
1	To provide an understanding of why Smart Grids are critical to the Sustainability and growth of India's electricity network.		
2	To enable a shift from today's situation to the intelligent, profitable, efficient, reliable		
3	To enable consumer orientated grid required to meet the challenges of the future with minimum impact to the environment.		
Course Outcomes:Students' will be able to:			
1	Understand what is the concept of Smart Grid		
2	Understand working of main components involved in Smart Electric Grid		
3	Analyse how electricity problem can be solved by Smart Electric Grid technology		
4	Observe and find solution on power quality issues on Smart Electric Grid		
5	Know about importance of communication technology in smart Electric Grid		
6	Understand what is the concept of Smart Grid		
Syllabus :			
Unit 1	**Introduction: (06 Hours)** What is driving the move towards Smart Grids globally and in India? What is a Smart Grid? Overview of how Indian power market is organized, operated and challenges being faced, Overview of how the Indian GENERATION, TRANSMISSION and DISTRIBUTION businessis operated and controlled and some of the challenges being faced. Role of Wind and Solar generation in power system operations, Importance of Load Management		
Unit 2	**Smart Grid Technologies: (10 Hours)** Introduction to Smart Meters, Real Time Pricing, Smart Appliances, Automatic MeterReading(AMR), Outage Management System(OMS), Plug in Hybrid Electric Vehicles(PHEV),Vehicle to Grid, Smart Sensors, Home & Building Automation, Phase Shifting Transformers. Smart Substations, Substation Automation, Feeder Automation. Geographic InformationSystem(GIS), Intelligent Electronic Devices(IED) & their application for monitoring &protection, Smart storage like Battery, SMES, Pumped Hydro, Compressed Air Energy Storage,Wide Area Measurement System(WAMS), Phase Measurement Unit(PMU).		
Unit 3	**Electrifying rural India through Smart grid: (06 Hours)** Electrifying India's rural community and the challenges being faced.(Developing technology andsystems that will enable smarter rural electrification, Financing programmes, Virtual powerplants, Solar power, Geothermic power), Smart Utilities (case studies), Presentation on the Smart Grid Maturity Model (SGMM), Architecture for smart grids.		

Unit 4	**Power Quality Issues in Smart Grid: (06 Hours)** Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected RenewableEnergy Sources, Power Quality Conditioners for Smart Grid, Web based Power Qualitymonitoring, Power Quality Audit.
Unit 5	**Information and Communication Technology for Smart Grid: (06 Hours)** Advanced Metering Infrastructure (AMI), Home Area Network (HAN), Neighbourhood AreaNetwork (NAN), Wide Area Network (WAN). Bluetooth, ZigBee, GPS, Wi-Fi, Wi-Max basedcommunication, Wireless Mesh Network, Basics of CLOUD Computing & Cyber Security for Smart Grid. Broadband over Power line (BPL). IP based protocols.

Elective VI

EE404A Power Quality and Harmonics			
Teaching Scheme :		**Examination Scheme:**	
Lectures	3 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	02 Hrs/ Week		
Credits (Th)	3	Credits(P)	1
Prerequisites Courses:			
1	Power Electronics, Power System		
Course Objective:			
1	Understand electrical power quality problems.		
2	Understand voltage sag and swell problem.		
3	Understand harmonic problem in system.		
4	Overcome harmonics in system by designing harmonic filters.		
5	Make aware about power quality measuring instruments /devices.		
6	Develop ability for effective measurement of power quality problems.		

Course Outcomes:Students' will be able to:	
1	Understand definitions of power quality, power quality standards.
2	Distinguish between voltage sag and swell.
3	Identify power quality disturbances & classify power quality problems.
4	Understand the methods to mitigate harmonics in system.
5	Design Active and Passive filters.
6	Know test locations and duration for power quality measurements.
Syllabus :	
Unit 1	**Power Quality-Introduction:(06 Hours)** Introduction, Electromagnetic phenomena–Transients, Long and short duration voltage variations, wave form distortion.
Unit 2	**Voltage Sag and Interruptions: (06 Hours)** End user issues: Ferro resonant Transformers, UPS systems Voltage Tolerance envelops of CBEMA & ITIC, Reliability Indices.
Unit 3	**Power Quality Monitoring: (06 Hours)** PQ measurement equipment and their use, wiring and grounding: Typical wiring and grounding problems, solutions with proper grounding practices and use of signal reference grid.
Unit 4	**Fundamentals of Harmonics: (06 Hours)** Representation characteristic harmonics, Harmonic indices Harmonic sources-6&12 pulse related harmonics, harmonic effects on power apparatus and on measurements, interference with communications.
Unit 5	**Harmonic Elimination: (06 Hours)** Shunt passive filters, types, Design considerations and illustrative examples, Active filters: types, current and voltage source active filters, shunt, series & Hybrid active filters.
Unit 6	**Harmonic Measurements: (06 Hours)** Analysis and Digital methods, presentation of Harmonic data, Response and standards for their limitation.

Text/ Reference Books:

1. "Electrical Power Systems Quality" by Roger C. Dugan, Mark F. Mc Granton & H. Wayne Beety – McGraw Hill.
2." Power System harmonics" by J. Arillaga, DA Bradley & PS Bodger – John Wiley Sons
3. "Power System Harmonics - Fundamentals, Analysis & filter Design" by George J. Wakileh – Springel.
4. "Uninterruptible Power Supplies and Active Filters" by Ali Emadi, Abdolhorein Nasiri & Stoyon B. Bekiarov, CRC Press.
5. "Electric Power Distribution Reliability" 2nd Edition Richard E. Brown, CRC Press.

Term Work:

At least six experiments based on the curriculum from the following list should be performed.

1.Study of Electrical power quality as per IEEE /IEC standard.

2. Interpret IEEE /IEC standard for recommended practices and requirements for Harmonic control in electrical power systems.
3.Simulation of voltage sag and swell by using MATLAB SIMULINK.
4. Analyze the performance of a three phase(star and delta) balanced and unbalanced system supplying R-L loadsby plotting phase currents, real, reactive and apparent power and power factor.
5. Measurement of harmonics using power Analyzer.
6.Study of different type of filters for harmonic elimination (using MiPower).
7. Analyze the harmonic spectrum of a single phase system with sinusoidal voltage source supplying a non-linear (rectifier) load.

Practical Examination:

The examination will be of three hours duration and will consist of an experiment based on term work and followed by an oral based on above syllabus.

EE404B Embedded System Design			
Teaching Scheme :		**Examination Scheme:**	
Lectures	3 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	2 Hrs/ Week		
Credits (Th)	3	Credits(P)	1
Prerequisites Courses:			
1	Digital Electronics, Microprocessors, Microcontrollers, C programming		
Course Objective:			
1	Study of RISC architecture.		
2	Understanding and usage of ARM development tools.		
3	Understanding linux kernel and device driver programming.		
4	Study, design and develop various embedded applications using ARM processor.		
Course Outcomes: Students will be able to:			
1	Understanding of RISC architecture of processor, its features and applications.		
2	Hands on usage of IDE of processors and algorithm development.		
3	To understand concept of OS, RTOS and application perspectives.		
4	Study, design, analyze and prototype various embedded systems.		
Syllabus :			
Unit 1	**Introduction to Embedded Systems: (08 Hours)** Embedded system definition, different scales of embedded systems, design with small scale embedded systems, CISC and RISC architecture, 32 bit Microcontrollers: Internal Block Diagram, CPU, ALU, address bus, data bus, control signals, Working Registers, SFRs, Clock and Reset circuits, Stack and use of Stack Pointer, Program Counter. I/O Ports, Memory structure, Data Memory, Program Memory , Architecture, Instruction set, different addressing modes, I/O ports, TIMER2 and interrupts, UART, External Interrupts and Timers.		
Unit 2	**ARM processor: (06 Hours)** Architecture, Processor modes, Register organization, Exceptions and its handling, Memory and memory management, ARM and THUMB instruction sets,		

	addressing modes, ARM floating point architecture. Real-Time system (RTOS) concepts, Kernel structure, Task management, Inter task communication & synchronization, Understanding Device Drivers.
Unit 3	**Assembly language programming and hardware interfacing techniques: (06 Hours)** Introduction to development tools like cross assembler, simulator, HLL cross compilers and in circuit emulators for system development. On-chip interfaces: Digital I/O pins, ADC, DAC, timers, counters, PWM, watchdog timers, LCD, LEDs, seven segment displays, I2C E2 PROM and their applications. External Interfaces: Stepper motor interfacing, DC Motor interfacing, sensor interfacing, SPI, CAN Protocols, USB protocol, Blue-tooth protocol. Writing application level programs for these interfaces using High level languages.
Unit 4	**Introduction to Real-Time /Embedded Operating Systems: (06 Hours)** Real Time Scheduling, Inter process communication, Programming paradigms: FSM and concurrent process models, Performance Metrics of RTOS, Linux &RTLinux Internals, Programming in Linux &RTLinux, Configuring & Compiling RTLinux, Overview of other RTOS.
Unit 5	**Advanced Embedded programming: (08 Hours)** Advanced C programming, Function calls, passing / returning values, Advance Pointers and Arrays, Hashing and Bitwise operation, Dynamic memory allocation, Introduction to OS services, Process, memory & I/O management, Socket and Thread programming, Data structure, Creating a linked list, linked stack and queue, double and circular linked list, sparse matrices, binary tree, Interrupt handling in C, Code optimization issues in Embedded C.
Unit 6	**Introduction to Raspberry Pi: (06 Hours)** Operational Basics, Hardware Dependencies for running OS n minimalist Setup, Getting started with Linux Shell scripting, Basics of kernel based hardware control, Device control from shell terminal, Remote access to device.

10. Technical references on www.arm.com

Term Work:

The term work shall consist of Embedded "C" programming for ARM processor using Keil Cross Compiler or SCARM compiler. Minimum 8 of the following Interfacings of following with LPC2148 are required along with some experiments on Raspberry Pi.

1. Digital input output.
2. Flashing LEDs.
3. 7-segment display.
4. LCD display.
5. Use of ADC for voltage measurement.
6. Waveform generation using DAC.
7. Sensor interfacing.
8. RTC interfacing.
9. E2PROM interfacing.
10. Stepper motor
11. DC Motor

Practical Examination:

The examination will be of three hours duration and will consist of an experiment based on term work and followed by an oral based on above syllabus.

EE404C Advanced Control System			
Teaching Scheme :		**Examination Scheme:**	
Lectures	3 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	2 Hrs/Week		
Credits (Th)	3	Credits(P)	1
Prerequisites Courses:			
1	Feedback Control System, Control system design		
Course Objective:			
1	Apply advance control techniques to electrical systems		
2	Explain Control system design by frequency response.		
3	Explain design of nonlinear control system using describing function concepts and phase plane techniques.		
4	Design optimal controller, Intelligent Controllers		
5	To know basic mathematical modelling of system		
Course Outcomes:Students' will be able to:			
1	Understand the concepts of nonlinear control system		
2	Understand the concepts of advance control theory using state-feedback approach		
3	Compare and analyze the classical control system with advance control system.		
3	Develop advanced controllers to the existing system using advanced control design techniques.		
4	Formulate optimal control problem.		
5	Understand process control system.		
6	Develop system modelling using stochastic process.		

Syllabus :	
Unit 1	**Non-linear Control system: (06 Hours)** Introduction to non-linear systems, Describing function analysis, phase plane analysis, bang bang control system, Lyapunovs stability analysis.
Unit 2	**State feedback control system:: (06 Hours)** Concepts of state, state variable, state model, state models for linear continuous time functions, diagonalization of transfer function, solution of state equations, physical systems and state assignment concept of controllability & observability, State feedback by pole placement, observers, Lag and Lead compensator design.
Unit 3	**Robust control system: (06 Hours)** Robust control systems and system sensitivity, Analysis of robustness, system with uncertain parameters, design of robust control system.
Unit 4	**Optimal Control System: (06 Hours)** Introductionto optimal control system, problems, Quadratic performance index, Introduction to Adaptive control
Unit 5	**Process control system: (06 Hours)** Introduction to process control, various control configuration such as: feedforward, cascaded etc. PID controller and implementation..
Unit 6	**System Modeling (06 Hours)** Introduction, types of modelling, modelling of time-varying, distributed, stochastic, nonlinear, discrete event and hybrid systems.

Text/ Reference Books:

2. Gopal. M., "Control Systems: Principles and Design", Tata McGraw-Hill, 1997.
3. Kuo, B.C., "Automatic Control System", Prentice Hall, sixth edition, 1993.
4. Ogata, K., "Modern Control Engineering", Prentice Hall, second edition, 1991.
5. Nagrath& Gopal, "Modern Control Engineering", New Age International.

Term Work:

At least six experiments based on the curriculum from the following list should be performed.

1. To design and study the effect of different Compensation for given system using MATLAB
2. To design and study the effect of different Compensation for given system using experimental kit
3. MATLAB program for state space analysis to transfer function, transfer function to state space analysis, controllability, observability, diagonalization of the system
4. Study of magnetic levitation using kit
5. To study transfer function of any one physical system
6. To study describing function analysis using MATLAB
7. To study 2nd order pole placement controller using MATLB
8. Experimentally evaluate the closed loop performance of the control setup for different P and PI controller settings and compare with simulation results.

Practical Examination: The examination will be of three hours duration and will consist of an experiment based on term work and followed by an oral based on above syllabus.

EE406: Seminar on Industrial Training			
Teaching Scheme :		**Examination Scheme:**	
Lectures	--	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	2 Hrs / Week		
Credits (Th)	--	Credits(P)	1
Students has to deliver seminar on industrial training along with submission of its report completed by them in summer vacation			

EE408 : Project (In house)			
Teaching Scheme :		**Examination Scheme:**	
Lectures	--	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	16 Hrs / Week		
Credits (Th)	--	Credits(P)	8

SEMESTER VIII (STRUCTURE B)

EE406: Seminar on Industrial Training			
Teaching Scheme :		**Examination Scheme:**	
Lectures	--	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	2 Hrs / Week		
Credits (Th)	--	Credits(P)	1
Students has to deliver seminar on industrial training along with submission of its report completed by them in summer vacation			

EE410 : Project (Industry / Research Institute)			
		Examination Scheme:	
Lectures	--	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	32 Hrs / Week		
Credits (Th)	--	Credits(P)	16

OPEN ELECTIVE

EEO410 Smart Electric Grid			
Teaching Scheme :		**Examination Scheme:**	
Lectures	4 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	--		
Credits (Th)	4	Credits(P)	--

Prerequisites Courses:	
1	Basic Electrical and Electronics
Course Objective:	
1	To provide an understanding of why Smart Grids are critical to the Sustainability and growth of India's electricity network.
2	To enable a shift from today's situation to the intelligent, profitable, efficient, reliable
3	To enable consumer orientated grid required to meet the challenges of the future with minimum impact to the environment.
Course Outcomes:Students' will be able to:	
1	Understand what is the concept of Smart Grid
2	Understand working of main components involved in Smart Electric Grid
3	Analyse how electricity problem can be solved by Smart Electric Grid technology
4	Observe and find solution on power quality issues on Smart Electric Grid
5	Know about importance of communication technology in smart Electric Grid
6	Understand what is the concept of Smart Grid
Syllabus :	
Unit 1	**Introduction: (06 Hours)** What is driving the move towards Smart Grids globally and in India? What is a Smart Grid? Overview of how Indian power market is organized, operated and challenges being faced, Overview of how the Indian GENERATION, TRANSMISSION and DISTRIBUTION business is operated and controlled and some of the challenges being faced.
Unit 2	**Smart Grid Technologies: (10 Hours)** Introduction to Smart Meters, Real Time Prizing, Smart Appliances, Automatic Meter Reading(AMR), Outage Management System(OMS), Plug in Hybrid Electric Vehicles(PHEV), Vehicle to Grid, Smart Sensors, Home & Building Automation, Phase Shifting Transformers. Smart Substations, Substation Automation, Feeder Automation. Geographic Information System(GIS), Intelligent Electronic Devices(IED) & their application for monitoring & protection, Smart storage like Battery, SMES, Pumped Hydro, Compressed Air Energy Storage, Wide Area Measurement System(WAMS), Phase Measurement Unit(PMU).
Unit 3	**Electrifying rural India through Smart grid: (06 Hours)** Electrifying India's rural community and the challenges being faced.(Developing technology and systems that will enable smarter rural electrification, Financing programmes, Virtual power plants, Solar power, Geothermic power), Smart Utilities (case studies), Presentation on the Smart Grid Maturity Model (SGMM),

	Architecture for smart grids.
Unit 4	**Power Quality Issues in Smart Grid: (06 Hours)** Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Web based Power Quality monitoring, Power Quality Audit.
Unit 5	**Information and Communication Technology for Smart Grid: (06 Hours)** Advanced Metering Infrastructure (AMI), Home Area Network (HAN), Neighbourhood Area Network (NAN), Wide Area Network (WAN). Bluetooth, ZigBee, GPS, Wi-Fi, Wi-Max based communication, Wireless Mesh Network, Basics of CLOUD Computing & Cyber Security for Smart Grid. Broadband over Power line (BPL). IP based protocols.

EEO412 Artificial Neural Networks and Deep Learning			
Teaching Scheme :		**Examination Scheme:**	
Lectures	4 Hrs/ Week	Theory: Mid Term:30 Marks End Sem. Exam :70 Marks	
Tutorials	--		
Practical	--		
Credits (Th)	4	Credits(P)	0
Prerequisites Courses: Engineering Mathematics			
1	Linear Algebra, Matrix Calculus, Feedback Control Systems,		
Course Objective:			
1	Understanding of basic concepts of Artificial Neural Networks and Architectures.		
2	Introduction to different training algorithms.		
3	Understanding the applications of ANN		
4	Understanding the concept of Deep Learning		
Course Outcomes:Students' will be able to:			
1	Understand and explain the basic concepts of Artificial Neural Networks.		
2	Analyse different ANN architectures.		
3	Understand and analyse the different training algorithms.		
4	Design and develop ANN applications in real world pattern recognition problems		
5	Understand about Deep Learning Concepts.		

Syllabus :	
Unit 1	**Introduction to Neural Networks: (06 Hours)** Historical perspective, the biological inspiration, Neuron Model, Network architecture, Perceptron architecture, Hamming Network, Linear Vector Spaces, Linear Dependence, Inner Product, Norm, Orthogonality
Unit 2	**Linear Transformations and Performance Surface Optimization for Neural Networks: (08 Hours)** Linear Transformations, Matrix Representations, Change of Basis, Eigenvalues and Eigenvectors, Performance Surfaces and Optimum Points, Taylor Series, Directional Derivatives, Minima, Necessary Conditions for Optimality, Quadratic Functions, Performance Optimization, Steepest Descent, Newton's Method, Conjugate Gradient
Unit 3	**Windrow-Hoff and Backpropagation: (07 Hours)** Windrow-Hoff, ADALINE Network, MSE, LMS algorithm, Multilayer Perceptron, Pattern Classification, Back propagation algorithm. Performance Index, Chain Rule, Batch vs. Incremental Training, Convergence
Unit 4	**Variations on Backpropagation and Generalization: (07 Hours)** Drawbacks, Heuristic Modifications, Numerical Optimization Techniques, Generalization, Methods for improving Generalization: Estimation of Error, Early stopping, Regularization, Bayesian Analysis, Relationship between early stopping and regularization
Unit 5	**Associative Learning, Competitive Networks and Radial Basis Networks: (06 Hours)** Associative Learning, Unsupervised Hebb Rule, Simple Recognition Network, Instar Rule, Simple Recall Network, Outstar Rule, Competitive Networks, Hamming Network, Competitive Layer, Competitive rule in biology Self-organizing Feature Maps, Learning Vector Quantization, Radial Basis Function Networks, Training RBFN
Unit 6	**Understanding of Deep Learning: (06 Hours)** Restricted Boltzmann machine, Auto-encoder, Convolutional Neural Networks
